

Many animals communicate. Like humans, they need to be able to “talk” to each other. They send their messages in different ways.

Bees use smells. They release an odor that warns other bees of danger. They also dance. This tells other bees where they can find nectar.

Dogs send messages too. They bark to warn others of danger or to show that they want to play. They whimper to tell others they are in pain. Dogs bite when they feel someone or something might hurt them.

- 1** Animals sometimes use odors to
 - a** offend each other.
 - b** communicate with each other.
 - c** amuse themselves.
- 2** Bees tell other bees where they can find nectar by
 - a** dancing.
 - b** buzzing.
 - c** whistling.
- 3** Dogs bark
 - a** only when they are puppies.
 - b** when they are dreaming.
 - c** to let other dogs know they want to play.
- 4** When dogs are in pain they might
 - a** whimper.
 - b** run away.
 - c** sleep.
- 5** If a dog thinks something might hurt it, it might
 - a** bite.
 - b** lick.
 - c** sleep.
